

ABSTRACT

DEVI KHOSIANO

The Completion Feature of Defelopmental Task in Male Adolescent with Mild Mental Retarded (Zamralita, MM, Psi and Mardiana, Psi); Bachelor Degree in Psychology, Universitas Tarumanagara (104 pages+R1-R2).

This research is performed in qualitative method using open interview to 4 subject of male adolescent by age range 15-16 years old. The research result that 4 respondent enough able to complete developmental task for adolescent which described by Havighurst. This is because of intens intervention from teacher and parent. Developmental task which best-completed is the task to receive his physic condition and useful it effectively. Developmental task that can complete by good are understand and receive role of each gender, prepare marriage and family living, plan to responsible social behavior, and reach to value system and certain ethic as manual to their behavior. When developmental task receive the mature relationship by peers and all gender, it struggle to separate himself from emotional dependence to parents and other adults, and prepare his economic carrier, not all subject can complete it by good. Developmental task that most not good to complete is prepare his economic carrier.
