Self Concept Overview of Middle Childhood Female Artist in terms of Ecological Microsystem Theory; Dr. Fransisca Iriani Roesmala Dewi, M. Si; Psychology Bachelor Degree Courses, Tarumanagara University, (122 pages, i-ix, R1-R2, A1-A6)

A stripping drama serial starred by female child artist has to do their daily routine. To know the self concept and the environment affect it the most is the purpose of this research. The microsystem refers to the interaction and relationship that the individual has with significant figures in their life such as, family, peers, school, and the community. The research method used was a qualitative method with purposive sampling technique. In-depth interviews conducted on four women artists middle childhood age, starting in April 2013 until September 2013. The results showed that the family and peers microsystem environment are to be the most environmentally influenced in a positive self-concept subject. Community environment microsystem giving a negative effect and parental supervision is very important.

Keywords: self-concept, children of middle childhood age, female artist, ecological microsystem
