This study aimed to determine the mediating effect of social negative cognitive errors between anxiety and four subtypes aggression in a sample of adolescents. This study discussed about anxiety, proactive aggression, reactive aggression, overt aggression, relational aggression, and also the existence of four dimensions of social negative cognitive errors. There were included 216 participants of school X and Y in Tangerang using convinience sampling technique. The data were analyzed using PLS analysis model, the result showed that anxiety affected these four subtypes of aggression with social negative cognitive errors as mediator.
