Need for aggression for adolescence (Monika, M.Psi. and Dra. Ninawati, M.M.). Undergraduate Program In Psychology, Tarumanagara University (i-xi; 61 pages, R1-R3, Appdx 1-83).

The purpose of this study is to find out the need for aggression in adolescence. Need for aggression is an individual need for attack or revenge to others. The subject in this study is the adolescence from SMA X, around 403 respondents, with range ages 15-20 years. This study uses Likert scale with middle score 2.50. The average of need of aggression is 2.11; therefore we can conclude that need for aggression of subject is relative low. There are 13 data control which is used to connect with the need for aggression, such as age, gender, grade, major, the score of Math, Indonesian & English, skill, daily pocket money, work status, hobby, favorite topic and products. Based on the Chi-square tests, from these 13 data control, all of them are $p>0.05$. This means there are no any significant differences from all data control to need for aggression on subject.

Key words: *need for aggression, adolescence*
