Self-concept description of the Early Adult Women Doing Aesthetic Surgery; Henny Wirawan Hum., Psi., Psychotherapist, QIA. CRMP; Program S-1 Psychology, University Tarumanagara, (i-ix; 77 Pages; P1-P3; L1-L15)

Beauty at this time to be a highly preferred by women in Indonesia in general. Had a body, pretty face, and an attractive appearance to be the desire of every woman. Beautiful eye shape becomes an important factor in the appearance. Women with offspring born ethnic Chinese in general have a narrow shape and small eyes, and no eye crease. Care who spend a lot of time and money, as well as the results do not necessarily correspond hopes of making people feel dissatisfied and ultimately chose an instant way to get a beautiful eye shape that is permanent, ie with aesthetic surgery. Aesthetic surgery is a surgery in medical science with the aim to beautify themselves. *Blepharoplasty* is a type of aesthetic surgery which includes the removal of the skin on the top and bottom of the eye excessive, as well as the removal of fat in the eye. Beautiful eye shape will support the appearance of the individual and the individual's self-concept will transform into a more positive marked with increased confidence. This study was conducted on three adult women who have undergone initial aesthetic surgery in the eyes (*blepharoplasty*) of at least one time. This research was conducted through interviews that took place between the dates of March 16, 2013 until December 21, 2013. The results showed that all three subjects meet the characteristics of positive self-concept after undergoing aesthetic surgery on the eyes (*blepharoplasty*). All three subjects showed positive changes in self-concept with results obtained from undergoing aesthetic surgery (*blepharoplasty*), which form a large eye, the eyeball is more evident, as well as the crease of the eye that facilitates three subjects up to produce a beautiful appearance and interesting, and able to improve self-esteem subjects.
