Decision Making Process in Man Who Had A Vasectomy; Untung Subroto, M.Psi., & Roswiyani P. Zahra, M.Psi; Undergraduate Program in Psychology, Tarumanagara University, (i-x; 111 Halaman; P1-P3; L1-L20)

Decision-making is an information processing in mind which is to form the strategy needed in everyday life (Hoyer & Roodin, 2009). This aim of research is to get Description of the decision-making process of young adulthood men that had a vasectomy. This research was conducted to 4 subjects aged 35-40 years. This research uses the descriptive qualitative method and data capture techniques through interviews and observation. This research result shows that the four subjects had many factors before choosing Vasectomy. All of the subject throughout the *circumstances* factor. All of the subjects throughout fourth stage of the decision-making process, only three subjects who passed the stages of decision-making processes throughout the stages *Appraising the Challenge*, *Surveying Alternatives*, *Evaluate the Alternatives*, *Make a Commitment*, and *Adhering despite negative feedback*. While the three subjects throughout all the stages of decision-making process, one subject (SD) only throughout three of it which is *Appraising the Challenge*, *Make a Commitment*, and *Adhering Despite Negative Feedback*.
