Relationship of Psychological Capital with Study Engagement in University Students; Dr. Zamralita, M.M., Psi; Dra. Ninawati, M.M.; Undergraduate Program of Psychology, Tarumanagara University, (i-x, 46 pages; P1-P7; L1-L37)

University students are people who study in university to mastering skills which will be used in the workplace. The students are expected to have good academic achievement as mastery indicator. Engagement has been proven had positive correlation with student's academic achievement. *Psychological capital* has been proposed as a variabel which had correlation with engagement and has been found had positive correlation with student's performance. The purpose of this research is to see relationship between psychological capital and engagement in university students. The subjects of this research are 424 students from X University in Jakarta which is one from the best ten private universities in Indonesia, *using cluster sampling and quota sampling based on proportion of students' amount in each faculty.*

The result showed significant positive relationship between psychological capital and engagement in university students with $r = 0.549$ and $p < 0.01$. Thus, the higher psychological capital is, then the higher is student's engagement.

Keyword : *Psychological Capital, Study Engagement, University Students.*
