Perbedaan *Self-Disclosure* Ditinjau Dari Identitas Diri Pada Muslim Dewasa Awal (Dr. Fransisca Iriani Roesmala Dewi, M.Si.); Program Studi Psikologi, Program Sarjana Strata Satu, Universitas Tarumanagara (i-xi; 70 pg, P1-P4).

The aim of this research is to find out the differences of self-disclosure from self identity observation muslim early adulthood. Self-disclosure is related to act of expressing which is verbal characteristic to the others belonging to thinking, feeling and experience. Self identity means as self development situation which have or not the crisis and commitment. Individual who have already achieve their identity will be happy and have high self-disclosure. The amount of participants in this research are 158 Muslim early adulthood have four self identity categories, there are diffusion, forelosure, moratorium and achievement. The researcher did this research by quantitative method, use the questioner for collecting the data and used Kruskal-Wallis test as a result of preparation data. Indication of this research result is not found the difference self-disclosure from self identity, $P=0,607 > 0,05$. The result shows that participants of self identity have already achieve, then it can not said that is high or low to execute self-disclosure, also the diffusion identity, forelosure and moratorium.

Keywords: Self-disclosure, Identity, Muslim, Early Adulthood.
