**The Influence Of Religious Music In Catholic Christian Teens Memory Recall; Dr. Monty P. Satiadarma, MS/AT, MCP/MFCC, DCH, S-1 study program of Psikology, University Tarumanagara, (i-xi; 59 pages, R1-R2, Appdx 1-32)**

Researcher noticed that music is used as a means to develop individual abilities. One of the capabilities that are developed is memory recall. Inspired by the use of music to develop individual abilities, the researcher examined the effect of music on memory recall. The purpose of this study is to look at the effect of one type of music to individual memory recall. In this research, researcher recruited subject that perform memory recall and still have cognitive which affected by the environment, the subject is at the stage of adolescent development. To represent the subject, researcher took junior high school students as research participants. The result showed that the subjects gained an increasing in average test scores when researcher play Gregorian music and contemporary Christian music. When researcher compared the average test scores of participants, researcher found that the increasing in the average test scores of participants who listened Gregorian music is higher than the increasing in average test scores of participants who listened to contemporary Christian music

Keywords: Memory recall and religious music.
